Sullivan, 1997 EXECUTIVE SUMMARY AND

**RECOMMENDATIONS** The goal of this TIP is to recommend guidelines for primary care clinicians to follow in caring for patients with alcohol and other drug use disorders. These guidelines were developed by a Consensus Panel of clinicians, researchers, and educators who work on the prevention and treatment of substance use disorders. Protocols are based partly on research evidence, partly on Panel members' clinical experience. The algorithm to the left follows a patient with substance use problems who presents in a primary care setting. The chart will serve as a guide or road map through screening, brief assessment, brief intervention, assessment, referral, specialized treatment, and followup care as they are detailed in the TIP. Since substance use disorders are often chronic conditions that progress slowly over time, primary care clinicians through their regular long-term contact with patients are in an ideal position to screen for alcohol and drug problems and monitor each patient's status. Furthermore, studies have found that primary care clinicians can actually help many patients decrease alcohol consumption and its harmful consequences through office-based interventions that take only 10 to 15 minutes (Kahan et al 1995; Wallace et al 1988). This potential, however, is largely untapped. Saitz and colleagues found that of a sample of patients seeking substance abuse treatment, 45 percent reported that their primary care physician was unaware of their substance abuse (Saitz et al in press). Yet even though screening and limited treatment of substance use disorders do not require a large time investment, the Consensus Panel that developed this TIP recognized that many primary care clinicians are already overwhelmed by the demands imposed by expanded gatekeeper functions. The Panel realized that a practical approach to addressing patients' substance abuse problems was needed, one that recognized the time and resource limitations inherent in primary care practice and offered a series of graduated approaches that could be incorporated into a normal clinic or office routine. Biological, medical, and genetic factors as well as psychological, social, familial, cultural, and other environmental features all bear on substance abuse. Addressing the condition effectively requires a team effort, especially when it has progressed beyond the early stage. For this reason, in addition to screening and intervention, treatment options; these guidelines include information about viable referral for assessment and treatment as well as followup. Readers will notice that the TIP contains more information on alcohol use and abuse than on use of illicit drugs. This reflects both the scope of the problems and the research literature available about them. It is estimated that about 18 million people with alcohol use problems and 5 million users of illicit drugs need treatment. Although the Panel recognizes that tobacco is an addictive substance with a major public health impact, it is not included in this TIP because the topic falls outside CSAT's purview. Readers are referred to *Smoking Cessation: A Guide for Primary Care Clinicians*, published by the Agency for Health Care Policy and Research (Agency for Health Care Policy and Research 1996). The Consensus Panel's recommendations are based on a combination of clinical experience and research-based evidence. In the list below, the summary guidelines supported by the research literature are followed by 1 clinically based recommendations; are marked 2. Citations supporting the former are referenced in the body of the document. Screening and assessment instruments mentioned below are

reproduced and discussed in Chapters 2 and 4 and Appendix C The guidelines are presented in more detail in Chapter 6

*Mastering the Core Teachings of the Buddha* Daniel Ingram,2020-01-20 The very idea that the teachings can be mastered will arouse controversy within Buddhist circles Even so Ingram insists that enlightenment is an attainable goal once our fanciful notions of it are stripped away and we have learned to use meditation as a method for examining reality rather than an opportunity to wallow in self absorbed mind noise Ingram sets out concisely the difference between concentration based and insight vipassana meditation he provides example practices and most importantly he presents detailed maps of the states of mind we are likely to encounter and the stages we must negotiate as we move through clearly defined cycles of insight Its easy to feel overawed at first by Ingram s assurance and ease in the higher levels of consciousness but consistently he writes as a down to earth and compassionate guide and to the practitioner willing to commit themselves this is a glittering gift of a book In this new edition of the bestselling book the author rearranges revises and expands upon the original material as well as adding new sections that bring further clarity to his ideas      **Raising the Standard** J.
